DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The references submitted by applicants and cited in the specification have been considered only to the degree that the examiner neither reads, writes, nor understands the Japanese language.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Japanese Patent Publication JP 2004162195, abstract (hereinafter Kosaka).

Kosaka discloses in the abstract artificial hair composed of filaments containing polytrimethylene terephthalate. In addition, the translated publication of Kosaka and Drawing 1 discloses that the filaments have a denier, melting point and glass transition temperature that is within the ranges of instant claim 2. Therefore, the teachings of

Art Unit: 1794

Kosaka as set forth in the translation anticipate the invention as claimed in present claims 1 and 2.

5. Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

6. Claims 3-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Fujimoto et al., 6,692,671 B2 (Fujimoto).

Fujimoto discloses a method of manufacturing filaments containing poly(trimethylene terephthalate) filaments, said method comprising melt-spinning the polymer at temperatures from 250 to 290°C, per claim 3, extruding the monofilaments in the draw zone at a temperature of from 30 to 200°C, per claim 5, and wherein the draw ratio is 1.3 to 4, as required by claim 4. See entire document, and for example, column 9, line 20 through column 10, and line 16. The preamble language of "manufacturing artificial" and "artificial hair manufacturing" has not been given patentable weight because this language is drawn to the intended use of the filaments.

Therefore the teachings of Fujimoto anticipate the invention as claimed in present claims 3-5.

No claims are allowed.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
